

3-Minute Pitch Video Script

Objective

Record a clean 3-minute walkthrough that covers:

1. The problem.
2. The solution.
3. A start-to-finish demo of the agent workflow in the live app.

Live app URL: <https://et-co-op.vercel.app>

Recording Plan (Timestamped)

0:00 - 0:20 | Problem

Narration: "Most households do not optimize tax declarations across both partners in one workflow. They lose money due to missed deductions, unclear old-vs-new regime decisions, and fragmented HR declaration actions."

On screen:

1. Show landing page with headline Joint Tax Terminal.
2. Keep the intro visible for 3 to 5 seconds.

0:20 - 0:45 | Solution

Narration: "ET Co-Op is a household money mentor built for two-partner planning. It combines deterministic tax optimization, AI guidance, and an action layer so users can go from analysis to execution quickly."

On screen:

1. Scroll slightly to show Sign In panel.
2. Highlight the Try Live Demo button.

0:45 - 1:05 | Instant Entry (No Auth Friction)

Narration: "For judging speed, we added one-click demo access. No typing, no setup."

On screen:

1. Click Try Live Demo.
2. Wait for dashboard to open with demo profile and prefilled data.

1:05 - 1:45 | Optimization Workflow

Narration: "Now the workflow starts: we run household optimization on prefilled 18 lakh and 12 lakh salary profiles, then compute leakage, regime recommendation, and prioritized investment actions."

On screen:

1. In Input Workspace, point to Partner A and Partner B values.
2. Click Run Household Optimization.
3. In Live Decision Board, point to:
 1. Tax Leakage
 2. Current Tax vs Optimized Tax
 3. Recommended regime and ranked suggestions

1:45 - 2:20 | Agent Guidance Layer

Narration: "Next, the mentor layer converts numeric output into human-readable guidance and HR-ready drafts."

On screen:

1. Click Generate AI Explanation + HR Email Drafts.
2. Show Human-readable Summary.
3. Show AI Key Moves.
4. Show HR Draft cards.

2:20 - 2:40 | Action Completion

Narration: "Finally, we complete the workflow with one action."

On screen:

1. Click Approve & Send to HR.
2. Show the success toast: Success: Declarations sent to HR.

2:40 - 3:00 | Business Impact + Close

Narration: "Result: one deterministic flow from input to recommendation to execution. In our impact model, this reduces manual effort, cuts advisory cost, and recovers meaningful tax value for households."

On screen:

1. Briefly show repository README and docs links:
 1. Architecture document
 2. Impact model
2. End on live app dashboard.

One-Take Narration Script (Ready to Read)

"Household tax planning is usually fragmented. Couples miss deduction opportunities, struggle with old-vs-new regime choices, and spend too much time preparing declarations. ET Co-Op solves this with a single workflow: deterministic optimization, AI-guided explanation, and execution support.

This is the Joint Tax Terminal. For judges, we removed friction with one-click access. I click Try Live Demo, and we enter directly with prefilled dual-income data.

Now I run optimization. The board instantly shows tax leakage, current versus optimized tax, and a recommended regime. It also ranks tax-saving actions and shows advanced planning views like FIRE readiness and life-event impact.

Next, I generate AI Explanation plus HR Email Drafts. The system translates raw financial output into clear key moves and ready-to-use draft communication.

To complete the flow, I click Approve & Send to HR. We get immediate success confirmation. So from raw household inputs to guidance to action, the journey is continuous, fast, and deterministic.

Business impact is strong: lower manual advisory time, lower operational cost, and measurable recovery of leakage value for households. This is ET Co-Op: practical financial intelligence designed for decision speed."

Recording Checklist

1. Record at 1080p, 30fps, system audio off unless needed.
2. Zoom browser to 100 percent or 110 percent for readability.

3. Keep one tab only to avoid distractions.
4. Speak clearly, target 145 to 165 words per minute.
5. Keep total duration between 2:45 and 3:05.

Backup Plan (If Live Network Fails)

1. Use cached local run and keep same click sequence.
2. Use screenshots of the output sections as fallback proof.
3. Keep the same narration and timeline.
